We need to persuade the government to get involved

The Indian Resource Panel members in conversation with Preeti Mehta on dealing with Resource Efficiency

Fostering Resource Efficiency by Seeking Resource Conservation and Reuse of Resources

April 14, 2017

The Indian Resource Panel in conversation with Preeti Mehta on dealing with Resource Efficiency

In this special session, the panelists discuss how to foster resource efficiency by seeking resource conservation and reuse of resources. The panelists highlight the importance of integrating resource efficiency into government policies and regulations to drive sustainable economic growth.

Preeti Mehta, the convener of the panel, states that resource efficiency is crucial for achieving sustainable development. She emphasizes the need for policies that encourage businesses and individuals to conserve resources and reuse waste materials.

Dr. Bhaskar Bhatnagar, a member of the panel, agrees and adds that resource efficiency can help reduce the environmental impact of businesses and industries. He suggests that the government should provide incentives for companies to adopt resource-efficient practices.

Dr. S. Venkatesh, another panelist, stresses the importance of education and awareness programs to promote resource efficiency. He believes that raising public awareness is crucial to change behavior and encourage resource conservation.

The panelists also discuss the role of technology in fostering resource efficiency. They highlight the potential of advanced technologies to reduce waste and conserve resources in various sectors.

Overall, the panelists stress the need for a comprehensive approach to resource efficiency, involving government policies, public awareness, and technological innovation. They call for more collaborative efforts among stakeholders to drive sustainable practices and contribute to a more resource-efficient future.

The panel concludes by emphasizing the importance of resource efficiency in achieving global environmental goals and ensuring a sustainable future for generations to come.
