Local Enterprises & their potential for Greening the Economy

1st June 2018, Friday, 2:30 pm - 4:30 pm
Hall 4, Vigyan Bhavan
Rajpath Road Area, Central Secretariat, New Delhi
Local Enterprises & their potential for Greening the Economy

Background note

Context: Indian Economy and Environmental Sustainability

India has experienced a steady growth in the last few years. The recent government estimates indicate that the real Gross Domestic Product (GDP) grew at a rate of 7.1% in 2016-17 over 2015-16. (MOSPI, 2017) Much of this growth is attributed to the progress of industrial sectors, such as manufacturing, construction, transportation, communication, utility services, etc., growing at a steady rate. Although rapid economic growth has brought huge benefits to India, it has had a detrimental effect on the country’s environment and social frames, exposing urban centres to serious pollution related concerns and rising inequalities arising due to the jobless scenario. The growing sectors, mainly secondary and tertiary, struggle to provide employment to the relatively larger share of workforce, unlike the agricultural sector. The situation, thus, warrants the need for adopting greener and fairer practices for development.

Micro, Small and Medium Enterprises – Role in Greening the Economy

According to FICCI’s estimates, within the manufacturing sector, the Micro, Small and Medium Enterprises (MSME) sector accounts for about 45% of the manufacturing output, 95% of the industrial units and 40% of exports. Besides, the sector provides employment to almost 60 million people, mostly in the rural areas of the country, making it the largest source of employment after the agriculture sector. The development of this sector, thus, holds key to inclusive growth, and plays a critical role in India’s future. In other words, **greening the MSMEs in manufacturing sector can help India achieve its dual objectives of jobs for the people and environmental sustainability.** Some of the arguments in favour of MSMEs include:

1. Local economic development results in more jobs being created, particularly for the poor. 
   Parthasarathy Farmers Producer Company and Sittilingi Organic Farmers Association, through local value addition of organic agriculture produce, are able to provide direct income benefits to the small holder farmers and marginalised communities in southern India.

2. Environmentally conscious MSMEs ensure green and inclusive economic development. 
   Rising waste generation is one of the major environmental and social concerns. Some MSMEs have seen this as an economic opportunity. Daily Dump has innovated a business model for composting of solid waste at the household level; while Green the Gap is using waste to make marketable products.

3. MSMEs bring diversity of business and risks, and thus strengthen resilience of the economy. 
   Traditional crafts have largely been marginalised by mass-produced machine-made consumer goods which tend to be cheaper due to the economies of scale associated with mechanisation. In such a time, entrepreneurial initiatives like Dastkar, Saathi Samaj Sevi Sanstha, Mithan Handicraft Development Private Limited are playing a critical role in sustaining the sector and the livelihood of people, mostly the poor and marginalised.
MSMEs at Crossroads of Environment and Development: Critical Levers for Integration

The Indian economy is seen as a bright spot in the global landscape. It is one of the fastest growing emerging market economies in the world. India has set for itself a target of expanding the manufacturing and industrial sector, to reach new and higher growth rates. India is expected to realise the target of 25% share of manufacturing in GDP, at best by 2025. (Data Quest, 2015) The manufacturing sector is also a highly resource intensive sector, and can be polluting. Environmental sustainability and resource efficiency are, therefore, critical elements that need to be explored.

_Sustainability is not an obvious choice for the decision makers to achieve the goal._

### Key Questions for Deliberation at triologue2047

As India treads into the new global development paradigm, _triologue2047_, recognising the opportunity, aims to deliberate on — the transformation needed for our nation to build a sustainable future for all; ensuring an economy that builds resilience in natural resources and green livelihoods. Our focus will be to highlight and discuss:

- What kind of transitions do we need from the current development paradigm? What is the role of MSMEs in this transition?
- What are the structural changes required to move towards greening the economy?
- How do we move beyond the current indicators of economic progress, and focus on well-being – of people and the planet? How will this benefit the MSME ecosystem?
