DEVELOPMENT ALTERNATIVES
Ms. Zeenat Niazi, Vice President
Ms. Gitika Goswami, Senior Programme Director

EXPERT CONTRIBUTORS
Our special thanks go to the many experts from not-for-profit organisation, investors and international agencies and research organisations who have provided invaluable perspectives and expertise throughout the project.

Ms. Neha Kumar, Climate Bonds Initiative
Ms. Nehmat Kaur, Climate Group
Ms. Kanika Chawla, CEEW
Mr. Suveen Sinha, IFC
Mr. David Morgado, AIIB
Ms. Aditi Puri, JICA
Mr. Udit Mathur, DFID
Mr. Nisheeth Srivastava, KfW
Mr. AP Sarma, SIDBI
Mr. KV Rao, NABARD
Mr. Pawan Singh and Team, PTC Financial Services
Mr. Jayant Prasad, cKers Finance
Mr. Dhanpal Jhaveri/Niyati Sharma, Eversource Capital
Mr. Chandan Bhavani, Yes Bank
Mr. Shameek Ray, ICICI Bank
Mr. Anand Shukla, Swiss Agency for Development and Cooperation (SDC)
In 2014, the Government of India embarked on an ambitious plan to increase the share of renewable energy in the country’s energy mix, setting targets to achieve 175 GW of installed renewable energy capacity by 2022.

This includes generation of

- 5 GW of small hydropower,
- 60 GW of wind power,
- 10 GW of waste-to-energy power,
- 100 GW of solar power.

This represents a quantum jump from current capacities of 3.5 GW, 23 GW, 4.4 GW and 4.2 GW, respectively (MNRE, November 2015).

The Indian government has pushed the goal further to generate 225 GW by the end of year 2020 after successful execution of previous targets.
1. BACKDROP OF THE STUDY

India’s unprecedented energy transition, led by a booming renewable energy market and increasing activity in the electric mobility sector, is marked by sustained high-level policy objectives and ambition. The policy framework of the country allows for accelerated private sector investment in both the implementation of clean energy and energy efficiency. Financing instruments are the true agents of change and act as a catalyst that enables stakeholders to transition from fossil fuel-based energy production towards a clean or green energy production which is done through Solar energy Plants (PV), Wind Energy, etc. The level of ambition in these sectors and the scope of the competition provide both a promise and an obstacle. The optimistic targets provide a forward commitment to the market and motivating private players to engage in market activity.

The Ministry of New and Renewable Energy (MNRE) set an ambitious goal of setting up 175 GW of renewable energy capacity by 2022, of which approximately 100 GW is planned for solar, 60 GW for wind and others for hydro, bio, among others. As of June 2018, the government aims to achieve 225 GW of renewable energy capacity by 2022, well ahead of its 175 GW goal set out in the Paris Agreement. The quantity of resources needed to achieve these goals, however, is enormous. The speed and efficiency of the energy transition were hindered by restrictions on access to capital, both in terms of adequacy and affordability. By setting renewable energy targets, mitigating land and evacuation risks, and centralized tax and subsidy schemes, the initial combination of innovative reverse bidding, supportive policy environment in terms of demand have certainly helped to drive investments.

The present report will assist stakeholders and practitioners in understanding the flow of climate change mitigation funds from source to destination. Hence, the report emphasizes more on the financial intermediaries and the availability of different sources of funds for development of clean energy and energy efficient projects in India.

2. RATIONALE FOR THE STUDY

The rationale for the study emanates from the fact that although there are some climate finance assessments conducted in the clean energy and energy efficient space for India, they do not necessarily address the specific data sources of climate finance from which states can accrue finance for clean energy projects and the conditionalities associated with it. The present study aims to address this gap.

3. AIMS AND OBJECTIVES OF THE STUDY

This study aims to develop an assessment of the current landscape of climate mitigation in clean energy finance, by identifying, comparing, and evaluating existing databases and initiatives that track finance. The three-fold objectives of the study are as follows:

a. To assess current finance flows especially private finance available at state level for climate action which is inclusive of primary sources of climate finance, important intermediaries and recipients of climate finance.

b. To identify main financial instruments used to finance climate change action. These broadly include grants, subsidies, bonds, and debt and equity instruments.

c. To assist Indian states in understanding the pre-requisites and criteria which needs to be fulfilled to access these sources of finance.

4. STUDY METHODOLOGY

The research methodology is exploratory in nature. Data has been accrued from both primary and secondary sources. The primary sources include 15 relevant stakeholders from multilateral development banks (MDBs), non-banking financial companies (NBFCs), bilateral agencies, commercial banks, development financial institutions (DFIs), private equity (PE) investors, project developers and civil society institutions. The secondary sources include relevant data from Climate Funds Update, Climate Fund Inventory Database of OECD, World Bank, ADB, EIB and UNFCCC. Relevant reports from IFC, Mercom India, Climate Bonds Initiative, Yes Bank to list a few have been referred to.

5. SCOPE OF THE STUDY

The scope of the study limits to assess climate change mitigation finance available for clean energy and energy efficient projects in India. Within the clean energy space, renewable energy projects pertaining to solar, wind and biomass is considered. Similarly, in the energy efficient space finance available to electric vehicles in the transport sector is incorporated.
6. GLOBAL LANDSCAPE OF CLIMATE CHANGE MITIGATION FUNDS FOR CLEAN ENERGY AND ENERGY EFFICIENT PROJECTS

The global landscape of climate change mitigation funds comprises of clean technology funds, green climate funds (GCF) and global environment facility (GEF) funds. A comparison of the pledged and disbursed amounts from figure 1 indicates that the disbursement rate from the GEF (4th phase) funds has been the highest and the same for the GCF has been extremely low. In fact, funds under GEF have witnessed higher disbursements over the years. Disbursement rates under the CTF and GREEEF has been low to moderate. It is also noticeable that although amounts to be disbursed from partnership for market readiness funds have been approved for some of the middle income countries of Brazil, Chile, China, Colombia, Costa Rica, India, Indonesia, Jordan, Mexico, Morocco, South Africa, Turkey, Thailand, Ukraine, and Vietnam, most of the funds have not been received by recipient countries.

Figure 1: Allocations vs Disbursement of Funds under major Global Funds (2007-2019)

7. GLOBAL FINANCIAL FLOW OF CLEAN ENERGY AND ENERGY EFFICIENT FUNDS TO INDIA

7.1 Major Contributors

India receives a substantial amount of clean energy mitigation funds from developed economies. These include both bilateral agency funds and funds received from global climate funds in which developed countries such as Germany, Japan, UK, France and US are the major contributors. The funds received are either in the form of loans or grants. Figure 2 on following page illustrates the volume of funds received from the global sources for clean energy and energy efficient projects in India.

7.2 Funding Mechanism

Most of the international funding is routed through multilateral development banks (MDBs) such as ADB, AIIB, EIB to name a few and also bilateral agencies such USAID, JICA, KfW and DFID. MDBs such as World Bank may provide direct funding to the project developers or route the funds through development financial institutions such as SIDBI, both public and private funded non-banking financial companies (NBFCs) such as IREDA and Power Trading Corporation (PTC) and nationalised banks such as State Bank of India (SBI). On the investor side, some of the big institutional investors also receive funds from MDBs to be further channelized to project implementation agencies. However, investors can mobilise money from the market i.e. domestic savings which can be invested for development of clean energy projects. Figure 3 illustrates the funding mechanism for clean energy projects in India, in which some of the investments are received directly by the project developers and some of the funding is routed through the different governmental entities.
Figure 2: Finance from Global Funds to India

Finance flow from Global Climate Funds to India

Source: DA Assessment
8. FINANCING SOURCES FOR CLEAN ENERGY PROJECTS IN INDIA

There are various sources of finance available for development of clean energy and energy efficient projects in India. The prominent ones are elaborated in the subsequent sections.

8.1. Finance provided by Climate Funds

The major fund providers for clean energy and energy efficient projects in India under UNFCCC include GEC, GCF and CTF. are one of the main sources of mitigation finance. The total number of projects being funded in India is 53 out of which 45 projects are focused on climate mitigation. Some of the available funds are highlighted in the annex.

8.2 Finance provided by MDBs

According to the latest report issued by MDBs on providing finance to countries, almost $431 billion has been assigned to emerging economies in 2018 for investing in projects that help these countries reduce their emissions and address climate risks. World Bank has sanctioned loans to the amount of $500 million to SBI for development of grid connected rooftop solar projects between 2016 to 2021. World Bank has also supported the Energy Efficiency Scale-up Programme for India to scale up energy savings in residential spaces and public sectors by strengthening Energy Efficiency Services Limited’s (EESL) institutional capacity and enhancing its access to commercial financing. Funds to the tune of $2500 million are available under World Bank Carbon Funds and Facilities for sectors such as agriculture, energy, energy efficiency and forestry.

Another example is that of Asian Development Bank (ADB), in which they signed a contract to invest $50 million in solar energy project developer Avaada Energy Pvt Ltd to facilitate and expand the investment horizon of the company. Some of the available funds with ADB include $237 mn from ADB Carbon Market Initiative, $298 mn from ADB Clean Energy Financing Partnership Facility and availability of $50 mn from the ADB Climate Change Fund.

---

1 Climate Funds Update, 2018
8.3 Finance provided by Bilateral Agencies

JICA provides financing for energy, water & sanitation, infrastructure, agriculture, disaster risk reduction, forestry, solid waste projects and projects related to environmental policy in India. Most of the funding provided by JICA is routed through IREDA and SIDBI. Very recently, JICA completed its Phase II financing to the tune of ¥30 billion (INR 1,800 crores) by financing renewable energy projects in India through IREDA. JICA has also provided finance for undertaking Phase III of MSME Energy Savings Project through a two-step loan procedure. The finance for the pan India project is routed through SIDBI. There is also an availability of $141.52 mn of fund for multi-sector projects. DFID, a UK government department responsible for administering overseas aid has an availability of $ 27 million for investment in multi-sectoral projects in India.

8.4 Finance provided by NBFCs

Several NBFCs such as IREDA has issued its first green masala bond worth issued the first green masala bond of $406 million, the proceeds of which are to be used to finance renewable energy in India of capacity 831 MW. Previously it has issued bonds with 10, 15, and 20-year terms, carrying interest at 8.16%, 8.55% and 8.55% per year, respectively (NRDC, 2019). Other privately funded NBFCs in India such as PTC India Financial Services (PFS), has also funded several projects in the country with 100 per cent emphasis on renewable energy projects.

8.5 Finance provided by Private and Public banks

Banks play a crucial role in providing finance to climate mitigation projects thereby driving low-carbon economy. Some of the Indian banks include ICICI Bank, Axis Bank, HDFC Bank, IDFC Bank, Standard Chartered Bank, Yes bank, Bank of Baroda, Union Bank of India, India Infradebt, IndusInd Bank and SBI. State Bank of India approved credit facilities amounting to ₹2,317 crore to corporates for financing grid connected rooftop solar projects under an SBI – World Bank programme. This funding created solar power capacity of an aggregate 575 MW. Additionally, SBI has an availability of $650 million for investing in renewable energy projects in India.

8.6 Finance provided by Equity Investors

There is a growing recognition of private capital investments in the renewable energy sector in India. Some of the pertinent examples in this regard include Green Infra Private Finance Limited (99 percent owned by IDFC Private Equity), Renew Power Ventures Private Ltd. (99 percent owned by Goldman Sachs Private Equity), and Continuum Wind Energy (majority owned by Morgan Stanley Infrastructure Partners), Private Equity/Venture Capital Funds). ReNew Power, one of India’s largest independent power producers (IPPs), has received investment from the Private Equity arm of Goldman Sachs, ADIA, CPPIB, Asian Development Bank, Global Environment Fund and Japan’s JERA. JERA had acquired 10 per cent stake by investing an amount of $200 million in 2017 at a valuation of $2 billion. ReNew has also raised about Rs 6,696 crore from all its investors. Goldman Sachs, the early backer of the company in 2011, had invested about $370 million in various tranches in 2013 and 2014.

8.7 Finance provided by Social Enterprises

Impact investing fund managers delegate funds to social sector and environmental projects. This new trend in finance is slowly but steadily gathering momentum. For example, Acumen Fund was established to enable social enterprises to scale, by filling the funding gap between philanthropic donations and later-stage financing propositions. At present, there is an availability of $ 3 mn of investment funds for multi-sector project development in India, especially in the sectors such as agriculture, education, energy, health, housing and water sectors.

9. AVAILABLE SOURCES OF CLIMATE MITIGATION FUNDS FOR INDIA

The climate financing database for states provides comprehensive information on funds at disposal for states and project developers on climate mitigation in clean energy and energy efficient projects. It provides necessary information on the status of funds available, the sectoral focus of funds, the procedural requirements in the application process, the financial instruments for funding and the minimum qualifying criteria for application. The database is expected to ease the process related delays linked to the identification of sources of funding by the state authorities. The list of climate change mitigation funding for clean energy and energy efficient projects is provided in annex 1.
10. POLICY RECOMMENDATIONS

- **Capital gains exemption on investment in renewable energy** - Providing capital gains exemption on investment in renewable energy projects through bonds, debt and equity will create a huge incentive for both domestic as well as foreign investors.

- **Providing grid charge exemptions to open access solar projects** - Providing grid charge exemptions to open access solar projects will boost domestic investor confidence and will lead to increase in the number of rooftop and small capacity solar projects.

- **Creating a single clearance window** - Projects have to deal with multiple stakeholders and get numerous clearances before the project can be executed. A single clearance window will lead to a shorter lead duration such as is favored by investors.

- **Creating a standard of benchmark for PV panels** - Creating a minimum standard will improve the overall quality of PV panels being used in the projects and will increase the yield as well as the duration of the project.

- **Power delivery contracts signed in foreign currencies** - The project developers should be permitted to be remunerated in foreign currency. Since, the currency unit of the invested amount in the project is in the form of foreign currency, this measure will allow the project developer to repay the debt faster and without the hassle of converting the amount from resident or local currency into foreign currency.

- **Designated locations of the projects** - Land acquisition from owners must be the responsibility of the government and the project builder should purchase the land from the government. This means that the project builder will be dealing directly only with the government and not the land owners.
## Annex: Investment Availability on Clean Energy Finance for Indian States
